PPN 006 PLAN

Carbon Reduction Plan

VES, LLC (trading as VRpatients) is committed to achieving Net Zero emissions by 2050.

01

NET ZERO COMMITMENT

VES, LLC (trading as VRpatients) is committed to achieving Net Zero emissions by 2050.

02

BASELINE EMISSIONS
FOOTPRINT

Baseline emissions are a record of the greenhouse gases produced in the past, before any strategies to reduce emissions were introduced. They are the reference point against which emissions reduction can be measured.

Baseline year: 2025 (1 January to 31 December 2025)

Additional details relating to the baseline emissions calculations

VES, LLC is a software company of approximately 40 employees that develops and delivers virtual reality and browser-based clinical simulation training. The company operates fully remotely and has no UK operations. This plan therefore reports emissions across all of the company's operations, which exceeds the minimum requirement to report UK operations.

Scope 1

Direct emissions: zero

We have no offices, premises or company vehicles, so there are no direct emissions from sources we own or control.

Scope 2

Purchased energy: zero

We purchase no electricity, heat or steam for premises we own or control, because we have none.

Upstream transportation and distribution

Included

Emissions from shipping company equipment, such as laptops, to employees.

Waste generated in operations

Zero

We have no premises under our operational control. Waste from staff working at home falls outside our operational boundary.

Business travel

Included

Emissions from flights, hotel stays and ground travel. This includes our annual in-person company summit, sales attendance at conferences and trade shows, and visits to customer sites.

Employee commuting

Zero

All employees work remotely and do not commute. Emissions from home working are not included in this baseline, because reporting them is optional under the reporting standard and reliable data is not yet available. We will assess whether to include a home-working estimate in future reporting.

Downstream transportation and distribution

Zero

Our products are software, delivered digitally. We do not ship physical products to customers.

Downstream transportation and distribution	0

03 CURRENT EMISSIONS REPORTING

Reporting year: 2025. This is our first Carbon Reduction Plan, so the reporting year is the same as the baseline year.

Emissions	Total (tCO2e)
Scope 1	0
Scope 2	0
Scope 3 (included sources)	[X]
Total emissions	[X]

04 EMISSIONS REDUCTION TARGETS

To progress towards Net Zero, we have adopted the following carbon reduction targets.

Business travel is our largest source of emissions, and some of it is necessary: an annual in-person company summit, and sales travel to conferences and customer sites. Because our emissions will partly depend on how the business grows, we set our interim target per employee as well as in total:

Interim target	Reduce business travel emissions per employee by [20]% by 2030, against our 2025 baseline.
Projection	We project that our total emissions will be approximately [X] tCO2e in 2030, a reduction of [X]% against our 2025 baseline.
Net Zero	Achieve Net Zero emissions by 2050.

Progress against these targets will be reviewed every year and reported in updates to this plan.

05

CARBON REDUCTION PROJECTS

Completed carbon reduction initiatives

The following environmental management measures are in place and will continue during the performance of any contract:

- **Remote-first operations.** Our whole workforce works remotely. This removes emissions from commuting and from running office premises.
- **Virtual meetings by default.** We use video conferencing for internal collaboration, customer meetings, product demonstrations and training wherever possible, instead of travelling.
- **Cloud hosting.** Our platform runs on cloud infrastructure rather than on-premises servers, which avoids the energy use of running and cooling our own hardware.
- **Digital product delivery.** Our products are delivered entirely digitally, with no manufacturing, packaging or physical distribution.
- **Equipment reuse and recycling.** Company equipment is reused where possible and recycled responsibly at end of life.

Because this is our first plan, and 2025 is both our baseline and reporting year, we have not yet quantified the reductions achieved by these measures.

Future carbon reduction initiatives

In the future, we will implement further measures, including:

- tracking business travel emissions systematically, so that future reporting is based on complete data
- a travel policy that favours virtual alternatives and combines customer visits and trade shows into single trips
- choosing a central, accessible location for our annual summit to minimise total travel
- assessing whether to include home-working emissions in future reporting

06

DECLARATION AND SIGN OFF

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard, and use the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions has been reported in accordance with the published reporting standard for Carbon Reduction Plans and the

Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the Managing Members of VES, LLC.

Signed on behalf of the supplier:

Emma Bourgraf

Director of Global Strategy and Operations,
Managing Member

Stevy Rogers

Accounting, Managing Member
